

Assignment 2

Name: Jiawei-Wang

Date: 2021.5.13

ID: S1239587

84

Question 1 (30 marks)
Please check q1.py.

29. should only print 1
if not fully/lay constrad

Question 2 (15 marks)

(a) [8]

The required information of each vertex is shown below:

The depth-first tree:

discovered order	1	2	3	4	5	6
vertex v	S	A	B	E	D	C
$d[v]$	1	2	3	4	5	6
$f[v]$	12	11	10	9	8	7
$\pi[v]$	-	S	A	B	E	D

(b) classification of edges: [4]

edge	(S,A)	(A,B)	(B,E)	(E,D)	(B,D)	(D,C)	(A,C)	(S,C)
type	tree	tree	tree	tree	forward	tree	forward	forward

(c) [3]

The ordering of the vertices obtained by the topological sort is:

(S, A, B, E, D, C).

(1)

15

Question 3 (15 marks)

order	1	2	3	4	5	6	7	8	9	10	11	12	13
edge	(x,w)	(x,y)	(y,w)	(A,B)	(C,D)	(Y,Z)	(E,D)	(B,D)	(X,Z)	(B,C)	(A,C)	(D,W)	(E,X)
weight	1	2	2	2	2	2	2	3	3	3	3	6	6
include or not	Yes	Yes	No	Yes	Yes	Yes	Yes	Yes	No	No	No	Yes	No

The resultant MST is as follows:

total weight : $2+3+1+2+2+2+2+6 = 20$

15

Question 4 (40 marks)

(a) [10]

For the NFA, the transition table f_ϵ with the lambda closures is:

f_ϵ	s	a	b	c	ϵ	$\lambda(s)$
start	0	\emptyset	\emptyset	\emptyset	$\{1\}$	$\{0, 1, 3\}$
	1	$\{2\}$	\emptyset	\emptyset	$\{3\}$	$\{1, 3\}$
	2	\emptyset	$\{1\}$	\emptyset	\emptyset	$\{2\}$
	3	$\{4\}$	\emptyset	$\{4\}$	\emptyset	$\{3\}$
final	4	\emptyset	\emptyset	\emptyset	\emptyset	$\{4\}$

(2)

10

Question 4 (cont'd)

(b) [20]

Constructing the transition table f_D of DFA, as follows:

$$\text{start state} = \lambda(0) = \{0, 1, 3\}$$

$$\begin{aligned} f_D(\{0, 1, 3\}, a) &= \lambda(f_\epsilon(0, a) \cup f_\epsilon(1, a) \cup f_\epsilon(3, a)) \\ &= \lambda(\emptyset \cup \{2\} \cup \{4\}) = \lambda(\{2, 4\}) \\ &= \{2, 4\}. \end{aligned}$$

$$\begin{aligned} f_D(\{0, 1, 3\}, b) &= \lambda(f_\epsilon(0, b) \cup f_\epsilon(1, b) \cup f_\epsilon(3, b)) \\ &= \lambda(\emptyset \cup \emptyset \cup \emptyset) = \lambda(\emptyset) = \emptyset. \end{aligned}$$

$$\begin{aligned} f_D(\{0, 1, 3\}, c) &= \lambda(f_\epsilon(0, c) \cup f_\epsilon(1, c) \cup f_\epsilon(3, c)) \\ &= \lambda(\emptyset \cup \emptyset \cup \{4\}) = \lambda(\{4\}) = \{4\}. \end{aligned}$$

Therefore, we have the following table:

	f_D	a	b	c
start	$\{0, 1, 3\}$	$\{2, 4\}$	\emptyset	$\{4\}$

There are two new final state:

$$\{2, 4\} \quad \{4\}.$$

$$f(\{2, 4\}, a) = \emptyset \quad f(\{2, 4\}, b) = \{1\} \quad f(\{2, 4\}, c) = \emptyset.$$

$$f(\{4\}, a) = \emptyset \quad f(\{4\}, b) = \emptyset \quad f(\{4\}, c) = \emptyset.$$

	f_D	a	b	c
start	$\{0, 1, 3\}$	$\{2, 4\}$	\emptyset	$\{4\}$
final	$\{2, 4\}$	\emptyset	$\{1\}$	\emptyset
final	$\{4\}$	\emptyset	\emptyset	\emptyset
	$\{1\}$	$\{2\}$	\emptyset	\emptyset
	$\{2\}$	\emptyset	$\{1\}$	\emptyset
	\emptyset	\emptyset	\emptyset	\emptyset

$$f(\{1\}, a) = \{2\}.$$

$$f(\{1\}, b) = \emptyset$$

$$f(\{1\}, c) = \emptyset$$

$$f(\{2\}, a) = \emptyset$$

$$f(\{2\}, b) = \{1\}$$

$$f(\{2\}, c) = \emptyset.$$

Question 4 (cont'd)

(b) [cont'd]

We rename the six states to 0, 1, ..., 5:

fD	s	a	b	c
start	0	1	2	3
final	1	2	4	2
final	3	2	2	2
	4	5	2	2
	5	2	4	2
	2	2	2	2

(c) [7]

States 2 and 3 have the same transition for all inputs, but state 2 is non-final while state 4 is final.
 States 1 and 5 have the same transition for all inputs, but state 5 is non-final while state 1 is final.
 Therefore we cannot merge them

(d) [3]

As a result, we obtain the following DFA:

(4)

3
